1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fishman (of record, 5982517).

Fishman teaches a pair of network elements (50, 51), two or more working fibers (elements 1), shared protection fiber (2), and switching means (40). Although he does not teach that each working ring has plural channels, he teaches that the working rings use SONET. In that SONET signals are usually multiplexed channels, it would appear that each of the signals on each of the rings (1) are made up of plural channels so that the terminals shown on each of ring (1) can communicate with each other with out interference. In that the protection fiber can operate when there is a loss of signal on any of the fibers, it would have been obvious that the protection fiber can provide a plurality of channels in excess of the number of channels of one or more of the working fibers.

3. Claims 4-8 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 9-14 are allowed.
